

Research Topic Ideas: Cybersecurity

50+ Cybersecurity Research Ideas + Sample Studies

By: [Derek Jansen](#) (MBA) | Reviewed By: [Dr. Eunice Rautenbach](#) | Updated March 2025

If you're just starting out exploring cybersecurity-related topics for your dissertation, thesis or research project, you've come to the right place. In this post, we'll help kickstart your research by providing a hearty list of cybersecurity-related research topics and ideas, including examples from recent studies.

PS – This is just the start...

We know it's exciting to run through a list of research topics, but please keep in mind that this list is just a **starting point**. These topic ideas provided here are intentionally **broad and generic**, so keep in mind that you will need to develop them further. Nevertheless, they should inspire some ideas for your project.

To develop a suitable research topic, you'll need to identify a **clear and convincing research gap**, and a **viable plan** to fill that gap. If this sounds foreign to you, check out our **free research topic webinar** that explores how to find and refine a high-quality research topic, from scratch. Alternatively, consider our **1-on-1 coaching service**.

Cybersecurity-Related Research Topics

1. Developing machine learning algorithms for early detection of cybersecurity threats.
2. The use of artificial intelligence in optimizing network traffic for telecommunication companies.
3. Investigating the impact of quantum computing on existing encryption methods.
4. The application of blockchain technology in securing Internet of Things (IoT) devices.
5. Developing efficient data mining techniques for large-scale social media analytics.
6. The role of virtual reality in enhancing online education platforms.
7. Investigating the effectiveness of various algorithms in reducing energy consumption in data centers.
8. The impact of edge computing on the performance of mobile applications in remote areas.
9. The application of computer vision techniques in automated medical diagnostics.
10. Developing natural language processing tools for sentiment analysis in customer service.
11. The use of augmented reality for training in high-risk industries like oil and gas.
12. Investigating the challenges of integrating AI into legacy enterprise systems.
13. The role of IT in managing supply chain disruptions during global crises.
14. Developing adaptive cybersecurity strategies for small and medium-sized enterprises.
15. The impact of 5G technology on the development of smart city solutions.
16. The application of machine learning in personalized e-commerce recommendations.
17. Investigating the use of cloud computing in improving government service delivery.
18. The role of IT in enhancing sustainability in the manufacturing sector.
19. Developing advanced algorithms for autonomous vehicle navigation.
20. The application of biometrics in enhancing banking security systems.
21. Investigating the ethical implications of facial recognition technology.
22. The role of data analytics in optimizing healthcare delivery systems.
23. Developing IoT solutions for efficient energy management in smart homes.
24. The impact of mobile computing on the evolution of e-health services.
25. The application of IT in disaster response and management.

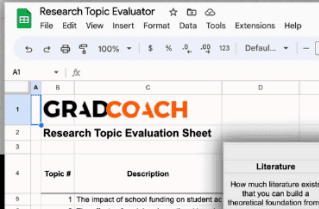

DON'T CHOOSE THE WRONG TOPIC

Your research topic is the single most important decision of your project.

This tool helps you get it right.

The screenshot shows the 'Research Topic Evaluator' web application. The main heading is 'GRADCOACH Research Topic Evaluation Sheet'. It features a table with columns for 'Topic #', 'Description', 'Literature', 'Originality', and 'Value/Significance'. The table is partially filled with research topics related to school funding, social and environmental learning, parental involvement, and student data. The interface includes a menu bar with options like File, Edit, View, Insert, Format, Data, Tools, Extensions, and Help. There are also various icons for navigation and editing, and a status bar at the bottom showing '14'.

Cybersecurity Research Ideas (Continued)

1. Assessing the security implications of quantum computing on modern encryption methods.
2. The role of artificial intelligence in detecting and preventing phishing attacks.
3. Blockchain technology in secure voting systems: opportunities and challenges.
4. Cybersecurity strategies for protecting smart grids from targeted attacks.

5. Developing a cyber incident response framework for small to medium-sized enterprises.
6. The effectiveness of behavioural biometrics in preventing identity theft.
7. Securing Internet of Things (IoT) devices in healthcare: risks and solutions.
8. Analysis of cyber warfare tactics and their implications on national security.
9. Exploring the ethical boundaries of offensive cybersecurity measures.
10. Machine learning algorithms for predicting and mitigating DDoS attacks.
11. Study of cryptocurrency-related cybercrimes: patterns and prevention strategies.
12. Evaluating the impact of GDPR on data breach response strategies in the EU.
13. Developing enhanced security protocols for mobile banking applications.
14. An examination of cyber espionage tactics and countermeasures.
15. The role of human error in cybersecurity breaches: a behavioural analysis.
16. Investigating the use of deep fakes in cyber fraud: detection and prevention.
17. Cloud computing security: managing risks in multi-tenant environments.
18. Next-generation firewalls: evaluating performance and security features.
19. The impact of 5G technology on cybersecurity strategies and policies.
20. Secure coding practices: reducing vulnerabilities in software development.
21. Assessing the role of cyber insurance in mitigating financial losses from cyber attacks.
22. Implementing zero trust architecture in corporate networks: challenges and benefits.
23. Ransomware attacks on critical infrastructure: case studies and defence strategies.
24. Using big data analytics for proactive cyber threat intelligence.
25. Evaluating the effectiveness of cybersecurity awareness training in organisations.

I didn't know if I was **good enough**.

See how Kelsee went from **lost and confused** to conquering her PhD.

Recent Cybersecurity-Related Studies

While the ideas we've presented above are a decent starting point for finding a research topic, they are **fairly generic** and non-specific. So, it helps to look at actual studies in the cybersecurity space to see how this all comes together in practice.

Below, we've included a selection of recent studies to help refine your thinking. These are **actual studies**, so they can provide some useful insight as to what a research topic looks like in practice.

- Cyber Security Vulnerability Detection Using Natural Language Processing (Singh et al., 2022)
- Security for Cloud-Native Systems with an AI-Ops Engine (Ck et al., 2022)
- Overview of Cyber Security (Yadav, 2022)
- Exploring the Top Five Evolving Threats in Cybersecurity: An In-Depth Overview (Mijwil et al., 2023)
- Cyber Security: Strategy to Security Challenges A Review (Nistane & Sharma, 2022)
- A Review Paper on Cyber Security (K & Venkatesh, 2022)
- The Significance of Machine Learning and Deep Learning Techniques in Cybersecurity: A Comprehensive Review (Mijwil, 2023)
- Towards Artificial Intelligence-Based Cybersecurity: The Practices and ChatGPT Generated Ways to Combat Cybercrime (Mijwil et al., 2023)
- ESTABLISHING CYBERSECURITY AWARENESS OF TECHNICAL SECURITY MEASURES THROUGH A SERIOUS GAME (Harding et al., 2022)
- Efficiency Evaluation of Cyber Security Based on EBM-DEA Model (Nguyen et al., 2022)
- An Overview of the Present and Future of User Authentication (Al Kabir & Elmedany, 2022)
- Cybersecurity Enterprises Policies: A Comparative Study (Mishra et al., 2022)
- The Rise of Ransomware: A Review of Attacks, Detection Techniques, and Future Challenges (Kamil et al., 2022)
- On the scale of Cyberspace and Cybersecurity (Pathan, 2022)
- Analysis of techniques and attacking pattern in cyber security approach (Sharma et al., 2022)
- Impact of Artificial Intelligence on Information Security in Business (Alawadhi et al., 2022)
- Deployment of Artificial Intelligence with Bootstrapped Meta-Learning in Cyber Security (Sasikala & Sharma, 2022)
- Optimization of Secure Coding Practices in SDLC as Part of Cybersecurity Framework (Jakimoski et al., 2022)
- CySSS '22: 1st International Workshop on Cybersecurity and Social Sciences (Chan-Tin & Kennison, 2022)

As you can see, these research topics are a **lot more focused** than the generic topic ideas we presented earlier. So, for you to develop a high-quality research topic, you'll need to **get specific** and laser-focused on a specific context with specific variables of interest. In the video below, we explore some other important things you'll need to consider when crafting your research topic.

P.S. There's more...
