Set up a Scheduled Scan in Vulnerability Management

Set up a Scheduled Scan in Vulnerability Management

Document created by Qualys Support on Nov 14, 2018. Last modified by Qualys Support on Oct 5, 2025.

Instructions

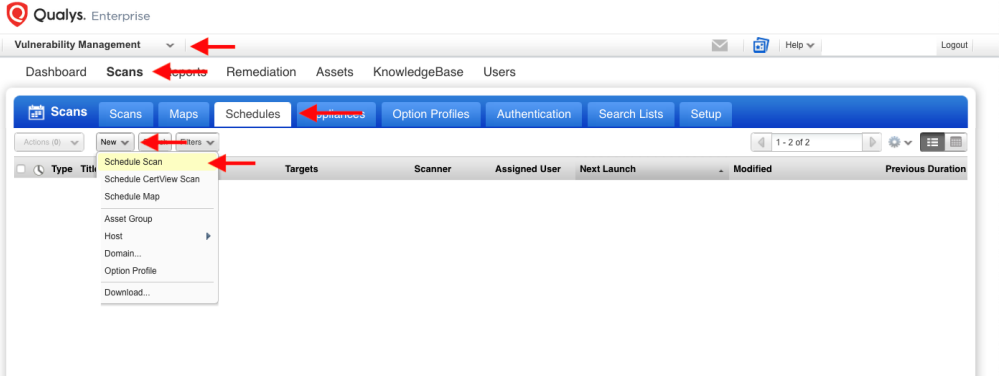

Overview

You can set-up a schedule scan if:

- You do not want to scan network during peak business hours.
- You want to scan your network after a few hours.
- You work with a global company and you want to set the scan to launch for the areas local time.

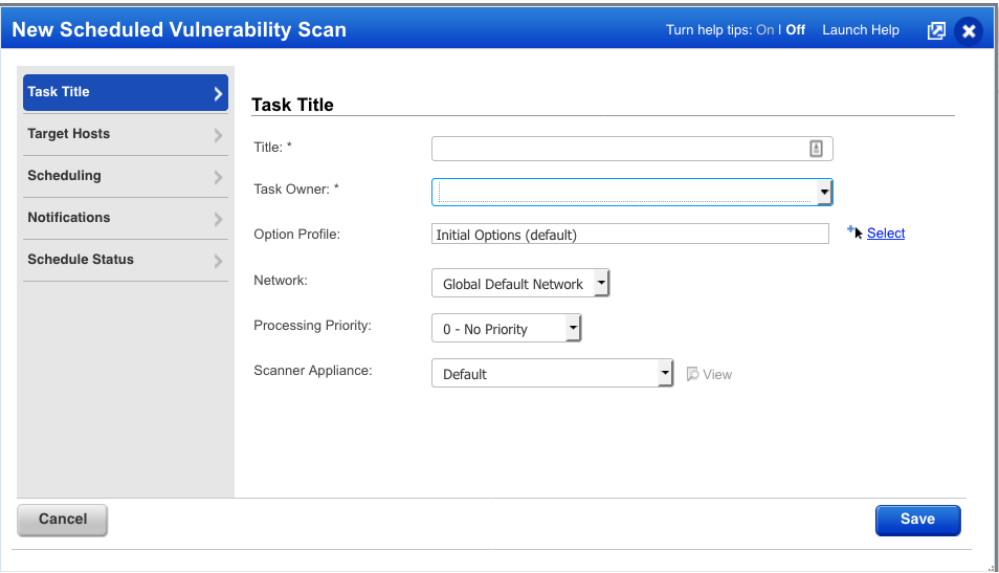

Procedure

1. Log in to **Qualys**.
2. Select **Vulnerability Management** from the drop-down list.
3. Select **Scans> Schedules> New> Schedule Scan**.

Note: Only Manager or Unit Manager you can:

- Set a user as a scan owner.
- Set the option profile to scan against.
- Dedicate a scanner appliance for the scheduled scan.

4. Under the **Target Hosts** tab, you can select the Assets you want scanned and Exclude any that are in that Group that you don't want to scan:

Task Title >

Target Hosts >

Scheduling >

Notifications >

Schedule Status >

Target Hosts

☒ Assets

☐ Tags

Asset Groups [Select](#)

IPs/Ranges [Select](#)

Example: 192.168.0.87-192.168.0.92, 192.168.0.200

Exclude IPs/Ranges [Select](#)

Example: 192.168.0.87-192.168.0.92, 192.168.0.200

☒ Scan agent hosts in my target

Cancel Save

You can also Select Assets by Tags. If you have any Agents in this scan be sure to select **Scan Agent hosts in my target** to get the Vulnerability information from the Agents.

Task Title >

Target Hosts >

Scheduling >

Notifications >

Schedule Status >

Set up email notifications for you and other users.

☒ Send notification Days before scan starts

☒ Send notification after scan completes

Recipients

We'll notify the task owner. To add more users, select from your distribution groups.

Distribution Groups: [Add Group](#)

Custom Message

The email will always include info like the title, owner, option profile and start time.

Custom message for email sent before scan starts

A Qualys scan is scheduled to start soon.

Custom message for email sent after scan completes:

A Qualys scan is finished.

Cancel Save

7. The **Schedule Status** tab is often the most over looked tab. This is where you can see if the scan has been deactivated. Scans get deactivated for several reasons:

- A user canceled a running scheduled scan instance when the schedule was defined with the occurrence "Relaunch on Finish".
- There were account configuration changes that impact the schedule, like changes to available assets, asset groups, option profiles and users.

Schedules are deactivated by the service, so you can evaluate the settings and make adjustments if necessary. Once your scan is properly configured with valid configurations you can activate the task by clearing the check box **Deactivate this task**.
